ABOUT ME

I am a Full Stack Developer with AI integration experience, focused on building intelligent and scalable web applications. With 6+ real-world projects including an AI Career Assistant, a PDF Chat App, and a tourism web application I have delivered clean architecture and secure backend systems that solve real business problems. I work with React.js, Next.js, Node.js, Express.js, MongoDB, Google LLM and other LLM, LangChain, Groq API, Firebase, and ChromaDB. I am currently looking for a junior full stack developer role, onsite or remote where I can contribute and grow.

EXPERIENCE

Full Stack Developer Intern

Culyte Software House

(July 2 — Present) Onsite

I am currently working as a Full Stack Developer intern at Culyte Software House, onsite, since July 2. Here I work together with the development team and learn how real software projects are planned, built, and delivered. I am working on both the frontend and the backend of web applications and using my full stack skills in real tasks. Working onsite has helped me communicate better with my team members, ask questions, and get quick feedback on my code. This internship is improving my problem solving abilities, my teamwork, and my confidence in writing clean and scalable code. I am also using my AI integration knowledge to build smarter features, and I am gaining hands-on experience that I can use in a real job.

Full Stack Developer Intern

TargLabs

(August — December) Remote

I worked as a Full Stack Developer intern at TargLabs remotely from August to December. During this internship, I created a tourism website called Toursite, a comprehensive tourism booking web application where users can explore and book travel packages. I built a user-friendly interface for browsing and booking travel experiences, integrated a payment gateway for secure transactions, and added real-time availability and booking management. While working on it, I gained hands-on experience in building a complete modern web application and collaborating with a professional development team. This internship improved my full stack skills, my problem solving abilities, and my confidence in delivering a real-world project from start to finish.

Full Stack Developer Intern

Fluxxion (Remote)

June 14 — August 14 Remote

I worked as an intern at Fluxxion from June 14 to August 14. During this internship, I created three projects that enhanced my practical knowledge and technical skills. This experience helped me apply my learning in real-world scenarios and improve my problem solving abilities. Every project helped me understand how to build a complete application, from the frontend to the backend and the database. I also learned how to plan my work, fix bugs, and finish my tasks on time while working remotely.

EDUCATION

BS in Computer Science

University of Peshawar

2023 - 2027 Peshawar

FSc Pre-Engineering

Government College Peshawar

2021 - 2023 Peshawar

SKILLS

React.js	Next.js	Tailwind CSS
Node.js	Express.js	MongoDB
Redux Toolkit	Vector DB	LangChain
Google AI & other LLM	Firebase	Google Analytics

PROJECTS

AI Career Assistant

- Developed a comprehensive AI Career Assistant built for fresh graduates and job seekers, helping them create professional, ATS-friendly resumes within seconds.
- Users can analyze their resumes, including PDF uploads, to get an ATS score, role readiness, strengths, weaknesses, and AI suggestions to improve their chances of getting hired.
- Users can practice AI mock interviews by selecting roles like HR, Technical, and CEO, to build confidence before real interviews.
- Built a daily AI credit system to track usage, limits, and remaining credits, with weekly and monthly analytics showing credits used and successful or failed API calls.
- Integrated Google Analytics 4 to track feature engagement and AI activity, and Firebase Cloud Messaging for real-time push notifications.
- Secured the application with JWT, HTTP-only cookies, Google login, and role-based access.
- **Tech Stack:** Next.js, React, Redux Toolkit, Tailwind CSS, Node.js, Express.js, MongoDB, Mongoose, LangChain, Groq API, GA4, Firebase FCM, Vercel

Tourism Web application

- Comprehensive tourism booking web application where users can explore and book travel packages.
- Integrated payment gateway for secure transactions.
- User-friendly interface for browsing and booking travel experiences.
- Real-time availability and booking management.

PDF Summary & Chat Application

- AI-powered web application that allows users to upload PDF documents and generate concise summaries and ask contextual questions based on document content.
- Implemented semantic search using vector database for accurate AI responses.
- Built with Next.js, Node.js, Express, MongoDB, and integrated Google Gemini API with a vector database (ChromaDB).
